

```
class DataClass {  
    private String strname;  
  
    public String getName() {  
        return this.strname;  
    }  
  
    public void setName(String name) {  
        this.strname= name;  
    }  
}  
public class Main {  
    public static void main(String[] main){  
        DataClass d = new DataClass();  
  
        d.setName("Java Programming");  
        System.out.println(d.getName());  
    }  
}
```
